KeepMyStore

What is KeepMyStore?

KeepMyStore is a Decision Intelligence Platform that helps businesses test decisions before investing money.

Instead of relying on assumptions, businesses can validate ideas using AI-driven conversations with real customers and receive evidence-based recommendations.

The platform continuously learns from customer interactions, market signals, and business outcomes to help organizations make better decisions.

The Problem

Businesses make expensive decisions every day:

- Should we launch this product?
- Should we change pricing?
- Should we enter a new market?
- Should we invest in this opportunity?
- What do customers actually want?

Most businesses answer these questions using:

- Internal opinions
- Small surveys
- Competitor observations
- Historical reports

This often leads to costly mistakes.

Our Approach

Instead of collecting static feedback, KeepMyStore runs automated validation tests.

The platform engages customers through AI-powered conversations, collects intelligence, analyzes responses, and generates recommendations for decision makers.

The goal is simple:

Reduce uncertainty before investment.

How KeepMyStore Works

Example: Product Launch Validation

A supplement company is considering launching:

Creatine Gummies

The leadership team is unsure whether customers will actually buy the product.

Traditionally they would:

- Research competitors
- Check trends
- Discuss internally
- Launch and hope for the best

This approach can result in inventory losses, wasted marketing spend, and failed launches.

Using KeepMyStore

Step 1

The business submits a decision to validate.

Example:

"I want to launch Creatine Gummies."

Step 2

The platform identifies relevant customer groups.

Examples:

- Existing creatine buyers
- High-value customers
- Repeat purchasers
- Fitness-focused customers

Step 3

AI starts personalized conversations.

Example:

AI:

"Hi John, thanks for purchasing Whey Protein from us. How has your experience been so far?"

Customer:

"It's been great."

AI:

"What do you like most about it?"

Customer:

"Convenience and effectiveness."

AI:

"If we launched a gummy version of a performance supplement, would that be interesting to you?"

Customer:

"Actually yes, I travel a lot."

Step 4

The platform continues gathering signals.

It learns:

- Interests
- Frustrations
- Product preferences
- Purchase intent
- Objections
- Customer needs

Step 5

KeepMyStore analyzes all conversations.

The system identifies:

- Positive signals
- Negative signals
- Customer segments
- Demand patterns
- Risk indicators

Step 6

Decision makers receive a report.

Example:

Product Validation Report

Product: Creatine Gummies

Customer Interest: 82%

Purchase Intent: 71%

Most Interested Segment: High-value fitness customers

Top Customer Concerns:

- Sugar content
- Product dosage
- Taste

Launch Confidence: 78%

Recommendation: Proceed with a limited pilot launch.

MVP

The first version focuses on one problem:

Product Validation

Capabilities:

- AI customer conversations
- Feedback collection
- Product interest testing
- Purchase intent measurement
- Decision reports

Outcome:

Businesses can validate product ideas before committing inventory and marketing budgets.

Version 1

Automated Decision Testing

Businesses can submit decisions they want to test.

Examples:

- Product launches
- Pricing changes
- Subscription offers
- Packaging changes

The platform automatically:

- Selects customer groups
- Creates conversations
- Collects signals
- Measures responses
- Produces recommendations

Outcome:

Decisions become measurable and testable.

Version 2

Customer Intelligence

The platform builds a continuously evolving understanding of customers.

It learns:

- Preferences
- Motivations
- Pain points
- Future interests
- Purchase behavior

Outcome:

Businesses understand customers at a deeper level than traditional surveys.

Version 3

Market Intelligence

Customer intelligence is combined with external signals.

Examples:

- Search trends
- Competitor activity
- Product reviews
- Economic indicators
- Industry trends

Outcome:

Businesses understand both their customers and the market around them.

Version 4

Business Intelligence

The platform begins supporting broader business decisions.

Examples:

- Pricing strategy
- Inventory planning
- Supplier risk analysis
- Market expansion decisions

Outcome:

Businesses reduce risk and improve profitability.

Long-Term Direction

KeepMyStore evolves into a Decision Intelligence Platform.

Organizations no longer use it only to collect feedback.

They use it to validate assumptions, test opportunities, reduce uncertainty, and make better business decisions.

The platform becomes the place decision makers go before committing resources to an important initiative.

Core Principle

Do not guess.

Test.

Learn.

Decide with evidence.
